

**For us
every drop of water
counts.**

Always.

ORANGE

Your water, our job

Since its was founded in 2007, ORANGE has supported its customers, mostly from water-intensive industries, with cutting-edge solutions that not only deliver value to all stakeholders, but help maximise the results of sustainable water management.

Our mission and vision.
For a better world.

Vision

We are committed to providing the most advanced technologies to contribute to a sustainable future, in the name of innovation and responsibility.

We make sure every drop of water counts!

With our customised solutions, we can help you create more value from your process, reduce costs over time and ensure the excellence of the finished product every day.

Being at the forefront with responsible innovation towards the well-being of people and the environment is what makes us unique partners for industry leaders throughout Italy.

Mission

We are committed to being a point of reference in the field of industrial and civil water treatment, thanks to our unique approach to problem-solving.

Why ORANGE

We focus on maintaining competitive prices, improving quality and ensuring regulatory compliance of our tailor-made solutions.

Competitiveness and reliability

At ORANGE we are aware of how competitiveness and reliability of supplies are integral components of our and your success, and that is why we have built our products and solutions around these fundamental values.

Broad portfolio of products and solutions

Our broad portfolio of high-performance products and solutions is our greatest source of pride.

Problem-solving orientation

What really sets us apart is our propensity to think outside the box, to find creative solutions to client problems that have no predefined answers.

“Best-in-class” customer service

At ORANGE, we understand the importance of offering comprehensive, first-rate customer support, from customer service to logistics, technical support to regulatory compliance.

Sustainability at the heart of all our activities

Sustainability is at the heart of everything we do. We are proud to be EcoVadis certified, recognizing our commitment to responsible business practices.

Through our 4R strategy (Reduce, Reuse, Recycle, Rethink), we aim to minimise our environmental impact while maximising resource efficiency, supporting a greener and more sustainable future, and considering the impact of current decisions on the legacy we will leave for future generations.

Ethic

Being **honest, transparent** and **credible** in everything we do not only helps us make the right decisions now, but strengthens our future successes.

Customer Satisfaction

We place great emphasis on **quality, service and exceeding expectations** wherever possible.

Passion

We believe that **passion for what we do helps us sow the seeds of success** through our continued dedication to creating real and lasting benefits.

Excellence

We are not satisfied with predefined answers, but we are dedicated to **finding customized solutions for every need**.

Our offer

INDUSTRY

ORANGE offers years of experience and advanced solutions to help maximise the results of sustainable water management. In every industry sector.

Our specialised treatments and chemical formulations provide safe and effective ways to manage the quality and safety of finished products, while reducing the energy consumption of our customers' facilities.

With our customised solutions, we can help our customers create more value from their processes, reduce costs over time, and ensure the excellence of the finished product every day.

Us and the Industry

Food

Waste Treatment

Textile and tanning

Steel and base metals

Chemical and pharmaceutical

Electronics

Ceramics and marble

Wastewater treatment

Paper

Hospitals

Building and Shopping centres

Power plants

Glass

Hospitality

CHEMISTRY

We save countless cubic metres of water and protect our customers' systems and assets.

We specialize in chemical treatments that can save significant amounts of water and protect systems from corrosion, scaling, organic fouling and microbial growth.

Our OneGar® line offers advanced products that improve water efficiency and protect infrastructure, ensuring compliance with the most stringent regulations. In addition, the OraGen® line offers enzymatic-bacterial bioactivators that optimise nitrogen cycling, improve COD reduction, and increase water quality.

Us and the Chemistry

Cooling circuits

Boilers and thermal circuits

Osmosis, Nanofiltration, Ultrafiltration

Pasteurisers and sterilisers

Purification plants

Pre-treatment plants

PLANTS

We help extend the life of systems and improve water quality.

Whether it's raw water, utility water or wastewater, we have the knowledge to ensure optimal quality and use. From managing reuse cycles to improving overall efficiency, our solutions are tailored to meet specific goals such as sustainability and reducing overall operating costs.

LEGIONELLA

We have always worked to prevent Legionella health risks in the industrial sector and in public facilities.

In addition to potentially devastating damage to people's health, outbreaks of legionellosis and legionnaires' disease can cause production disruptions due to plant closures and significant damage to the image and reputation of the companies involved.

We design and build these types of systems with skill and commitment:

- Reverse osmosis, ultrafiltration and nanofiltration
- Water softeners, demineralisers and EDI systems
- Filtration and metal abatement systems
- Wastewater purification plants
- Pretreatment plants
- Dosing and control systems
- Chlorine dioxide producers

Our range of proven solutions includes:

- Risk identification and analysis tools
- Specific risk management programs
- In-line automation and sanitising treatments
- Sanitisation of water systems
- Training and information programs

To learn more about how ORANGE can help your business manage water more effectively and sustainably, contact us today.

We are at your disposal for personalised consultations. Join us on our journey towards a more sustainable future.
